

# **PSL-C v2.0 — Formula Protection Document**

This document asserts authorship and copyright protection over the PSL-C formula, its hierarchical ordering, DSL structure, category definitions, and semantic sequencing. Authored by: Zach Bogart (PromptBuilder Research Lab, Clyde NY).

## **1. Scope of Protection**

This document covers the PSL-C ordering formula, taxonomy, category hierarchy, compact notation, and all structural logic unique to PSL-C v2.0 including the OBJ category.

## **2. Protected Elements**

The following are considered authored intellectual property:

- The hierarchical ordering of PSL-C categories.
- The structural logic and semantic flow (global → action → object → camera → environment → dialogue).
- The compact DSL (STY/COL/LOC/.../CLP).
- The OBJ integration and placement after CHARACTER BEHAVIOR.
- The Prompt Structured Language for Cinematic (PSL-C) name and formula.

## **3. Non-Protected Elements**

Generic words (e.g., 'camera', 'lighting') are not protected. What is protected is your specific arrangement, ordering, taxonomy, purpose, and DSL format.

## **4. Legal Status**

PSL-C is automatically copyrighted upon creation. The timestamp of digital publication and repository commits reinforces authorship and establishes prior art.

## **5. Permission for Use**

Users may use PSL-C for scene prompting so long as attribution to the author remains intact.

## **6. Author Statement**

I, Zach Bogart, assert authorship over the PSL-C formula and approve this document for distribution.

## **7. Version**

This protection applies to PSL-C v2.0, including the addition of OBJ.
